

5 n8n Automation Templates — Step-by-Step Setup Guides

Copy These Workflows Into Your n8n Instance in Under 30 Minutes Each — by [@taruns_ai](#)

These are the 5 automations I build most often for clients. Together they've powered projects up to \$14,840 and helped 15 staffing firms streamline their operations. Each guide below walks you through every node, every connection, and every configuration — no guessing required.

Prerequisites: n8n installed (run

```
npx n8n
```

or use n8n.cloud free tier). A Gmail account for email nodes. A Google Sheet for logging. API keys for Claude and ClickUp if using those templates.

1. LEAD FOLLOW-UP SEQUENCE

What it does: When a new lead comes in via webhook (form, landing page, Calendly), it sends an immediate welcome email, waits 3 days, sends a follow-up with value, waits 4 more days, sends a closing email, and logs the entire sequence in a Google Sheet.

Setup time: 20-25 minutes

Node List (7 nodes)

#	Node Type	Name	Purpose
1	Webhook	New Lead Trigger	Receives incoming lead data (name, email, company)
2	Gmail	Welcome Email	Sends immediate acknowledgment email
3	Wait	Wait 3 Days	Pauses the workflow for 3 days
4	Gmail	Value Follow-Up	Sends follow-up with a useful insight
5	Wait	Wait 4 Days	Pauses the workflow for 4 more days
6	Gmail	Close Email	Sends a "closing the loop" final email

7	Google Sheets	Log Sequence	Logs lead + sequence status to a tracking sheet
---	---------------	--------------	---

Connections

New Lead Trigger → Welcome Email → Wait 3 Days → Value Follow-Up → Wait 4 Days → Close Email → Log Sequence

Email Templates

Welcome Email (Node 2):

Subject: Thanks for reaching out, {{{json.name}}}

Hi {{{json.name}}},

Thanks for your interest. I got your message and will review the details within 24 hours.

In the meantime – here's a quick overview of how I typically help {{{json.company_type || 'businesses like yours'}}}:

1. Identify the 3 highest-ROI processes to automate
2. Build and test in 1-2 weeks (not months)
3. Hand off with documentation so your team owns it

Talk soon,
[Your name]

Value Follow-Up (Node 4):

Subject: Quick thought for {{{json.company || 'your team'}}}

Hi {{{json.name}}},

Following up with something useful – most teams I work with automate these 3 things first:

1. Lead follow-up (biggest ROI, fastest to build)
2. Weekly reporting (saves 3-5 hours/week)
3. Client onboarding checklists (eliminates missed steps)

Would any of these be relevant to you? Happy to share how I set them up.

[Your name]

Close Email (Node 6):

Subject: Closing the loop

Hi {{{json.name}}},

I've reached out a couple of times and don't want to be a pest. If

automation isn't a priority right now, totally understand.

If timing changes, my calendar is always open: [Calendly link]

All the best,
[Your name]

Google Sheet Setup (Node 7)

Create a sheet called "Lead Sequence Log" with columns: Name, Email, Company, Webhook Date, Welcome Sent, Follow-Up Sent, Close Sent, Status. Map each field from the workflow data.

2. WEEKLY CLIENT REPORT

What it does: Every Monday at 9am, it pulls task data from ClickUp, sends the raw data to Claude for a professional summary, and emails the formatted report to the client. No more spending 45 minutes writing weekly updates manually.

Setup time: 25-30 minutes

Node List (5 nodes)

#	Node Type	Name	Purpose
1	Schedule Trigger	Monday 9am	Fires every Monday at 9:00 AM
2	HTTP Request	Get ClickUp Tasks	Pulls tasks from ClickUp API (completed last 7 days + in progress)
3	HTTP Request	Claude Summary	Sends task data to Claude API for a professional summary
4	Gmail	Send Report	Emails the formatted report to the client
5	Google Sheets	Log Report	Logs report date + summary to a tracking sheet

Connections

Monday 9am → Get ClickUp Tasks → Claude Summary → Send Report → Log Report

ClickUp API Setup (Node 2)

URL: `https://api.clickup.com/api/v2/list/[LIST_ID]/task`
Method: GET
Headers: Authorization: [YOUR_CLICKUP_API_KEY]
Query params:
 `statuses[]: complete`

```
statuses[]: in progress
date_updated_gt: {{$now.minus(7, 'days').toMillis()}}
```

Claude Prompt (Node 3)

```
URL: https://api.anthropic.com/v1/messages
Method: POST
Headers:
  x-api-key: [YOUR_CLAUDE_API_KEY]
  anthropic-version: 2023-06-01
  Content-Type: application/json
Body:
{
  "model": "claude-sonnet-4-20250514",
  "max_tokens": 1024,
  "messages": [{
    "role": "user",
    "content": "You are a project manager writing a weekly client report. Summarize these ClickUp tasks into a professional weekly update email. Group by: Completed This Week, In Progress, and Next Steps. Keep it under 200 words. Be specific about what was done.\n\nTasks:\n{{$json.tasks}}"
  ]}
}
```

Email Template (Node 4)

```
Subject: Weekly Project Update – {{$now.format('MMM d, yyyy')}}

Hi [Client Name],

Here's your weekly update:

{{$json.content[0].text}}

Let me know if you have any questions or want to adjust priorities for next week.

Best,
[Your name]
```

3. NEW CLIENT ONBOARDING

What it does: When a new client signs (triggered by webhook from your payment tool or manual trigger), it automatically creates a ClickUp project from a template, sends a welcome email with next steps, and posts a notification in your Slack channel. The entire onboarding checklist runs without you lifting a finger.

Setup time: 20-25 minutes

Node List (5 nodes)

#	Node Type	Name	Purpose
1	Webhook	New Client Trigger	Receives client info (name, email, project type, start date)
2	HTTP Request	Create ClickUp Project	Creates a new list in ClickUp with pre-set tasks
3	Gmail	Welcome Email	Sends onboarding email with next steps
4	Slack	Team Notification	Posts in your #clients Slack channel
5	Google Sheets	Log Client	Adds client to your master client tracker

Connections

New Client Trigger → Create ClickUp Project → Welcome Email → Team Notification → Log Client

Note: Nodes 3, 4, and 5 can run in parallel after Node 2 if you prefer. In n8n, connect Node 2's output to all three.

ClickUp Project Creation (Node 2)

```
URL: https://api.clickup.com/api/v2/folder/[FOLDER_ID]/list
Method: POST
Headers: Authorization: [YOUR_CLICKUP_API_KEY]
Body:
{
  "name": "{{json.client_name}} – {{json.project_type}}",
  "content": "Client: {{json.client_name}}\nEmail: {{json.client_email}}\nStart: {{json.start_date}}",
  "status": "active"
}
```

Welcome Email (Node 3)

```
Subject: Welcome aboard, {{json.client_name}} – here's what happens next

Hi {{json.client_name}},

Excited to get started on {{json.project_type}}. Here's what to expect this week:

1. I'll send you a brief questionnaire (5 min to complete)
2. We'll have a 30-min kickoff call to map your workflows
3. I'll deliver a project plan with timeline by end of week
```

Action needed from you:

- Reply to the questionnaire when it arrives (tomorrow)
- Share access to tools we discussed (I'll send specific instructions)

Your project space is set up and ready. If anything comes up before our kickoff call, just reply to this email.

Looking forward to it,
[Your name]

Slack Notification (Node 4)

```
Channel: #clients
Message: :tada: New client signed!
*Client:* {{$json.client_name}}
*Project:* {{$json.project_type}}
*Start date:* {{$json.start_date}}
*ClickUp:* {{$node["Create ClickUp Project"].json.url}}
```

4. CONTENT REPURPOSER

What it does: You paste a content topic or raw notes into a Google Sheet. The workflow reads new rows, sends them to Claude to generate (1) a short-form video script, (2) an Instagram carousel outline, and (3) a LinkedIn post — then writes all three back to the sheet. One idea becomes 3 pieces of content in under 2 minutes.

Setup time: 25-30 minutes

Node List (6 nodes)

#	Node Type	Name	Purpose
1	Schedule Trigger	Every 30 Min	Checks the sheet for new rows every 30 minutes
2	Google Sheets	Read New Topics	Reads rows where "Status" column is empty
3	HTTP Request	Claude — Video Script	Generates a short-form video script (60-90 sec)
4	HTTP Request	Claude — Instagram Carousel	Generates a 7-slide carousel outline
5	HTTP Request	Claude — LinkedIn Post	Generates a LinkedIn post (hook + body + CTA)
6		Write Results	

Google
Sheets

Writes all 3 outputs back to the row + sets
status to "Done"

Connections

Every 30 Min → Read New Topics → Claude — Video Script → Claude — Instagram Carousel → Claude — LinkedIn Post → Write Results

Google Sheet Setup

Create a sheet called "Content Pipeline" with columns: Topic, Raw Notes, Video Script, Instagram Carousel, LinkedIn Post, Status, Date Processed.

Claude — Video Script Prompt (Node 3)

Body:

```
{
  "model": "claude-sonnet-4-20250514",
  "max_tokens": 1024,
  "messages": [{
    "role": "user",
    "content": "Write a 60-90 second short-form video script about this topic. Use a strong hook in the first line. Include exactly 3 key points. End with a clear CTA. Format: HOOK → POINT 1 → POINT 2 → POINT 3 → CTA. Keep it conversational and punchy.\n\nTopic: {{$json.Topic}}\nNotes: {{$json['Raw Notes']}}"
  ]
}
```

Claude — Instagram Carousel Prompt (Node 4)

Body:

```
{
  "model": "claude-sonnet-4-20250514",
  "max_tokens": 1024,
  "messages": [{
    "role": "user",
    "content": "Create a 7-slide Instagram carousel outline about this topic. Slide 1: Hook/title (make them stop scrolling). Slides 2-6: One key insight per slide with a bold headline + 1-2 supporting sentences. Slide 7: CTA (follow + save + share). Keep text short – each slide should be readable in 3 seconds.\n\nTopic: {{$json.Topic}}\nNotes: {{$json['Raw Notes']}}"
  ]
}
```

Claude — LinkedIn Post Prompt (Node 5)

Body:

```
{
  "model": "claude-sonnet-4-20250514",
```

```
"max_tokens": 1024,
"messages": [{
  "role": "user",
  "content": "Write a LinkedIn post about this topic. Structure: 1-line
hook (pattern interrupt or bold claim) → 1 line of whitespace → 5-7 lines
of body (story or teaching) → CTA asking readers to comment or DM. Use
short paragraphs. No hashtags. No emojis. Under 200 words.\n\nTopic:
{{$json.Topic}}\nNotes: {{$json['Raw Notes']}}"
}]
}
```

5. INVOICE REMINDER

What it does: Every weekday morning, it reads your invoices Google Sheet, filters for overdue invoices (due date is in the past + status is "unpaid"), sends a polite reminder email for each, and logs that the reminder was sent. No more chasing payments manually.

Setup time: 15-20 minutes

Node List (5 nodes)

#	Node Type	Name	Purpose
1	Schedule Trigger	Weekdays 9am	Fires Monday-Friday at 9:00 AM
2	Google Sheets	Read Invoices	Reads all rows from the invoices sheet
3	IF	Filter Overdue	Passes through only rows where due_date < today AND status = "unpaid"
4	Gmail	Send Reminder	Sends a polite payment reminder to each overdue client
5	Google Sheets	Log Reminder	Updates the row with "Reminder Sent" + today's date

Connections

Weekdays 9am → Read Invoices → Filter Overdue → Send Reminder → Log Reminder

Google Sheet Setup

Create a sheet called "Invoices" with columns: Client Name, Client Email, Invoice Number, Amount, Due Date, Status, Reminder Sent, Reminder Date.

IF Node Configuration (Node 3)

Conditions (AND):

- `{{$.Status}}` equals "unpaid"
- `{{$.Due Date}}` is before `{{$.now.format('yyyy-MM-dd')}}`

Output: TRUE branch → Send Reminder

FALSE branch → (no action, end)

Reminder Email (Node 4)

Subject: Friendly reminder – Invoice `{{$.Invoice Number}}`
(`{{$.Amount}}`)

Hi `{{$.Client Name}}`,

Hope you're doing well. Quick reminder that Invoice `{{$.Invoice Number}}` for `{{$.Amount}}` was due on `{{$.Due Date}}`.

If it's already been sent, please disregard this note. If not, here are the payment details:

- Amount: `{{$.Amount}}`
- Invoice #: `{{$.Invoice Number}}`
- Payment link: [Your payment link]

Let me know if you have any questions or need me to resend the invoice.

Thanks,
[Your name]

Log Update (Node 5)

Update the matching row: set "Reminder Sent" to "Yes" and "Reminder Date" to today's date. Use the row number from Node 2 to target the correct row.

Pro tip: These 5 automations are what I demo in discovery calls. When a prospect sees a working lead follow-up sequence or an automated weekly report, they immediately understand the value. Build all 5, record Loom walkthroughs of each, and you have a portfolio that sells itself. This approach helped me achieve 93-98% email open rates and land clients paying up to \$14,840 per project.
