PROFESSIONAL SUMMARY

AI Automation Specialist who builds end-to-end operational systems for staffing companies, ecommerce businesses, and service firms. I turn manual, repetitive processes into automated workflows that run 24/7 — cutting costs, reducing hiring time, and eliminating human error. Top Rated Plus on Upwork with 100% Job Success Score across 16 completed projects. Over \$30,000 earned in under 12 months.

KEY RESULTS

- **Hiring Time Reduction:** Built content + Airtable automation that cut hiring from 6 weeks to within 1 week for staffing firms
- **Candidate Quality:** AI screening system improved qualified candidate rate from 40% to 78%
- **Email Performance:** Automated outreach campaigns achieving 93% open rates (peaked at 98%)
- **Ad Spend Optimization:** Website visitor tracking system delivered same client volume at 30% of original ad spend for a healthcare company
- **Legacy CRM Integration:** Reverse-engineered hidden APIs for CRMs with zero documentation (Lakeshore, DocuSign, Controlio) — 60-node workflow handling 14,000 leads across 10 sub-accounts
- **Content Automation:** Built system converting 20-minute voice memos into 42 social media posts per month, reducing content creation time by 95%

SERVICES

Lead Generation Automation

Multi-channel outreach systems using LinkedIn, email, and AI personalization. Website visitor tracking and warm lead capture. Cold email campaigns with automated follow-up sequences.

Hiring & Recruitment Automation

AI candidate screening and scoring. Automated interview scheduling. CRM integration for applicant tracking. Personalized AI video outreach to candidates.

CRM Build-Outs & Integration

Go High Level, ClickUp, HubSpot, and legacy CRM automation. Custom API integrations including reverse-engineered endpoints for systems with no documentation.

Operational Systems

SOP generation from screen recordings. Automated client reporting. Onboarding workflows. Voice agents. Content generation pipelines.

TECHNICAL SKILLS

CLIENT INDUSTRIES

- **Staffing & Recruitment** — 15 firms across Los Angeles, Texas, and Washington
- **AI Automation Agencies** — Built lead gen, omni-channel, voice agent, and CRM systems (largest project: ~\$14,840)
- **Healthcare** — Website visitor tracking and warm lead automation
- **Ecommerce** — Operational automation and content systems
- **Metal & Construction** — Legacy CRM integration (Lakeshore/Back Office)

UPWORK PROFILE

- **Rating:** Top Rated Plus
- **Job Success Score:** 100%
- **Projects Completed:** 16
- **Specialization:** AI Automation, CRM Integration, Lead Generation

- **Since:** September 2025 (Top Rated Plus status)

APPROACH & METHODOLOGY

- **Problem-First:** I diagnose the real problem before proposing solutions. Most clients think they need more features — they usually need more leads or better processes first.
- **Reverse Engineering:** I start from the desired end result and work backwards. What one thing solves 80% of the problem? Start there.
- **SOP Before Automation:** I document the manual process before automating it. Without SOPs, automation breaks.
- **Phases, Not Features:** Phase 1 = revenue-generating systems. Phase 2 = optimization. Phase 3 = scaling. Never build Phase 3 before Phase 1 is working.

BACKGROUND

Former primary school teacher (Grade 3, age 9) in Chiang Rai, Thailand. The transition from teaching to AI automation wasn't random — teaching nine-year-olds to write clear sentences is the exact skill that makes AI prompts work. Also a visual artist (8 mediums including oil painting, charcoal, and watercolor) and musician (guitar, piano). Art taught patience. Patience is what lets me reverse-engineer a CRM with zero documentation while everyone else quits.

VISION

Building Web AI Automations into a \$1-2 million/year business that helps companies eliminate operational bottlenecks through AI. Every business deserves the operational infrastructure that only large corporations could previously afford.
